Boil Water Advisory for Terre Du Lac (PWS ID #MO4036059), Select Residents at 466, 472, 476, 484, and 492 Champs Elysees and 1594 Rue Valerie

Due to a loss in water pressure, Confluence Rivers UOC is now placing select residents living at 466, 472, 476, 484, and 492 Champs Elysees and 1594 Rue Valerie under a precautionary Boil Water Advisory.

Children, seniors, and persons with weakened immune systems are particularly vulnerable to harmful bacteria, and all customers in the affected area should follow these directions:

To ensure destruction of all harmful bacteria and other microbes, water used for human consumption (drinking, cooking, making ice, diluting juices/beverages, making infant formula, brushing teeth, washing hands/faces, etc.) should be boiled using the following methods:

- Bring water to a rolling boil ($\geq 212^{\circ}$ F) for three (3) minutes.
- Let water cool sufficiently ($\leq 110^{\circ}$ F) prior to use.
- In lieu of boiling, individuals may purchase bottled water or obtain water from some other suitable source for drinking water or human consumption purposes.

Customers are also encouraged to observe the following precautions:

- Disinfect food contact surfaces (dishes) by immersing them for at least one (1) minute in disinfected water containing a ratio of one (1) teaspoon of unscented household bleach to one (1) gallon of water.
- Water used for bathing does not need to be boiled but children should be kept under observation to prevent accidental ingestion of bath water.

When water sample results indicate that no contamination is present, we will notify customers that it is no longer necessary to boil the water and that the boil water advisory has been lifted.

Please share this information with others who drink the water and may not have directly received this notification.

If you have questions concerning this matter or would like to receive future notifications, you may contact Confluence Rivers UOC Customer Support at 1-866-945-3920 or support@confluencleriversuoc.com.
